

Veera Venkat Sai Kondaiahpalpu

Data Analytics & Machine Learning Engineer | M.Sc. Applied Computer Science, SRH Stuttgart
Stuttgart, Germany | veeravenkatsaikondaiahpalpu@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFILE

Early-career data analyst with 15 months of industry experience and a Master's student in Applied Computer Science. Skilled in Python, statistical analysis, and ML model development. Experienced in structuring project documentation and communicating findings to non-technical stakeholders. Eager to support IPRI's federally funded research at the intersection of data science and business decision-making.

PROFESSIONAL EXPERIENCE

Data Analyst

Aug 2023 – Nov 2024

AVS Associates, India

- Performed large-scale statistical data validation, anomaly detection, and inconsistency correction across operational datasets to ensure accuracy in recurring business reports.
- Generated structured analytical reports and comparative analyses supporting management decision-making; presented insights clearly to non-technical stakeholders.
- Maintained digital project documentation and implemented validation workflows to support data governance across teams.

PROJECTS

Hybrid Loan Risk Evaluation System — Python · NLP · Google Cloud Vertex AI · Streamlit

- Designed a hybrid ML architecture combining NLP-based risk signal extraction from unstructured text with Google Cloud AutoML for loan risk classification — applying statistical and ML techniques to a real-world business decision problem, directly analogous to IPRI's data-driven SME research.
- Implemented severity-weighted evaluation metrics reflecting financial risk impact over standard accuracy measures, bridging quantitative modelling with business relevance.
- Deployed a cloud inference endpoint with offline fallback for reproducibility; built an interactive Streamlit dashboard to communicate model results clearly to non-specialist audiences — matching IPRI's requirement for results presentations and structured project documentation.
- Conducted systematic model comparison and validation, documenting methodology and findings in structured reports suitable for research-grade review.

Smart City Traffic & Vehicle Tracking System — Redis · MongoDB · Neo4j · FastAPI

- Architected a multi-database real-time data system with graph-based route optimization, congestion analytics, and a live REST API dashboard — demonstrating applied data engineering for operational decision support.

Study Abroad Decision Prediction System — Python · Scikit-learn · Statistical Modelling

- Built a supervised classification pipeline with stratified 5-fold cross-validation, imbalanced data handling, and feature leakage prevention — achieving ROC-AUC of 0.99 after rigorous statistical validation.

TECHNICAL SKILLS

Programming	Python (advanced), SQL, R (familiar)
Stats & ML	Regression, Classification, Cross-Validation, ROC-AUC, EDA, Feature Engineering, Pandas, NumPy
Tools	MS Office, Git, Streamlit, FastAPI, Google Cloud Vertex AI, MongoDB, Redis, Neo4j
Languages	English (fluent) German (A2, learning) Telugu & Hindi (native)

EDUCATION

M.Sc. Applied Computer Science — SRH Hochschule Stuttgart

2025 – Expected 2027

B.Tech. Computer Science — JNTUH University, India

2019 – 2023
